

Sustainable Accessible Future Environments

LEARNING DIARY

ISP KRANJ – DAY 1

DATE: 06/11/2023

Today we learned something new about safety, especially about safety in public places. When we talk about safety in public places, we divide people into two groups, service providers and service users. For the service user, service providers must design: safe design (accessibility, lights), clear signs, maintenance, cleanliness, crime prevention (security patrol), emergency response (evacuation guide, first aid).

The feeling of safety in public spaces is important, and it is achieved through easy accessibility, clear signs and instructions, cleanliness, the availability of first aid and so on.

We also learned what SWOT means. SWOT analysis is a framework for identifying and analyzing an organization's strengths, weaknesses, opportunities and threats. These words make up the SWOT acronym. The primary goal of SWOT analysis is to increase awareness of the factors that go into making a business decision or establishing a business strategy.

The other students (who do not come from architecture) learned what mapping is and how we work at our faculty.

MEMORY OF THE DAY:

By far the most memorable was the evening. We had a lot of fun getting to know each other and getting to know another country.

ISP KRANJ – DAY 2

DATE: 07/11/2023

Today we learned what accessible tourism means. This means that it must be accessible to all people, because every year we have a significant growth of the 65+ group and an increase in the number of severely disabled people.

We also learned who the disabled are. This is an individual who has a reduced ability to move or problems with performing normal motor activities, as a result, it affects the upper or lower limbs various causes such as congenital, hereditary, acquired or accident-related.

We also had conversations with disabled people. Our group had a conversation with deaf people and two disabled people in wheelchairs. Each of them has problems that we do not face and cannot identify with. It is interesting that they have problems with things that seem everyday to us, for example deaf people communicate with gestures and therefore need to watch each other, if they talk while walking it can be dangerous for them if they are not paying attention to the things around them.

We also tried what it's like to be old with a walker and moved around the location a bit.

MEMORY OF THE DAY:

A conversation with a disabled person in a wheelchair who, considering his condition, was still a big optimist and even joked about his condition.

ISP KRANJ – DAY 3

DATE: 08/11/2023

Today we had a lecture entitled What is Social Science? Social sciences study human societies, social relationships and various aspects of human behavior. The aim of the social sciences is to create knowledge about how societies function, develop and form human behavior.

The main disciplines of social science: anthropology, economy, political science, psychology and sociology. With their help, various social theories are developed. Social theories can also be used to predict the future behavior of society, social trends and developments.

MEMORY OF THE DAY:

It was interesting to watch the other students making the model, as their primary study is not practice but rather theory.

ISP KRANJ – DAY 4

DATE: 09/11/2023

Today we learned something about social policy. Social policy is intended to address and influence various social issues within society. The regulations set by the government are supposed to be created to promote equality and social well-being of citizens. Their primary goal is to improve overall quality life for individuals and community while addressing social challenges and differences.

Then, in groups, we talked about different scenarios of our location, how we see it in the future, how to improve it, how to make it more accessible. In doing so, we had to go back to our location analysis and find out what and where we could change something.

MEMORY OF THE DAY:

Having fun while modeling scenarios and creating location concepts with collages.

ISP KRANJ – DAY 5

DATE: 10/11/2023

Today was our last day of socializing and creating at this SAFE workshop. In the group, we completed the presentation, made a poster and prepared a model for the presentation. The day passed quickly, but since we mostly had everything done, we were able to enjoy our free time.

MEMORY OF THE DAY:

Unfortunately, I could not attend the presentations, so I said goodbye to the group before they left for Kranj. I had a really great group.
